Аннотация дисциплины
«Пропедевтика хирургических болезней»

Название дисциплины	Пропедевтика хирургических болезней
Трудоемкость дисциплины	6 кредита, 180 часов
Курс, семестр	3 курс: 5,6 семестр
Место дисциплины в учебном плане (пререквизиты, постреквизиты)	Дисциплина «Пропедевтика хирургических болезней» относится к профессиональному циклу учебного плана, является обязательной дисциплиной. **Пререквизиты:** Анатомия Гистология, эмбриология, цитология Нормальная физиология Клиническая биохимия Микробиология, вирусология Топографическая анатомия и оперативная хирургия Патологическая анатомия, клиническая патанатомия Пропедевтика внутренних болезней Фармакология **Постреквизиты:** Лучевая диагностика Факультетская хирургия Госпитальная хирургия Комбустиология Детская хирургия Онкология Анестезиология и реанимация Эндоваскулярная хирургия
Цели и задачи дисциплины	• **Цель** формирование у студентов знаний, умений и навыков, необходимых будущему врачу. Научить обучающегося сбору и анализу информации о состоянии здоровья пациента, решению практических задач диагностики, лечения, реабилитации больных и профилактики заболеваний, навыкам профессионального врачебного поведения, основам клинического мышления, ведению медицинской документации • Подготовка врача, обладающего общими и специальными компетенциями способствующими его социальной мобильности и устойчивости на рынке труда, готовность к последипломному обучению с последующим осуществлением профессиональной врачебной деятельности в избранной сфере. • Выработка у студентов целеустремленности, организованности, трудолюбия, ответственности, коммуникативности, толерантности, повышения общей культуры. **Задачи дисциплины:** • Помочь студентам овладеть знаниями основывающейся на способности к самостоятельному изучению и анализу показателей, характеризующих состояние

	здоровья различных возрастно-половых, социальных, профессиональных и иных групп населения, мероприятий по сохранению, укреплению и восстановлению здоровья; • Сформировать теоретические основы и практические навыки сохранения и укрепления здоровья населения, профилактике заболеваний; • Освоить навыки внедрения новых эффективных экономических и медико-социальных технологий в деятельность лечебно-профилактических учреждений; • Освоить методы и средства совершенствования функционирования учреждений здравоохранения.
Компетенции:	Дисциплина способствует формированию следующих компетенций: ПК-5 - способен и готов проводить и интерпретировать опрос, физикальный осмотр, клиническое обследование, результаты современных лабораторно-инструментальных исследований, написать медицинскую карту амбулаторного и стационарного больного взрослого и ребенка; ПК-6 - способен и готов применять методы асептики и антисептики, использовать медицинский инструментарий, владеть техникой ухода за больными; ДПК-4 - применять практические навыки, методы диагностики и тактику лечения при оказании медицинской помощи в неотложных состояниях;
Результаты освоения дисциплины	Результаты освоения дисциплины формируются с использованием активных глаголов Таксономии Блума: После освоения данной дисциплины студент: *будет знать* – *этиологию, патогенез, диагностику, лечение и профилактику наиболее часто встречающихся заболеваний среди населения.* – *основные закономерности развития и жизнедеятельности организма человека, на основе структурной организации клеток, тканей и органов;* – *анатомо-физиологические, возрастно-половые и индивидуальные особенности строения и развития здорового и больного человека;* *будет способен* – *получать информацию из различных источников, работать с информацией в глобальных компьютерных сетях, применять возможности современных информационных технологий для решения профессиональных задач;* – *интерпретировать результаты обследования, поставить пациенту предварительный диагноз, наметить объем дополнительных исследований для уточнения диагноза. Сформулировать клинический диагноз.* – *пальпировать на человеке основные костные ориентиры; собрать анамнез; провести опрос пациента, провести физикальное обследование пациента (осмотр, пальпация, перкуссия, аускультация, измерение АД, определение характеристик пульса, частоты дыхания и т.п.).* – *использовать методы общего клинического обследования и интерпретацией результатов лабораторных, инструментальных методов диагностики у пациентов.*

	– *использовать методы ведения медицинской учетно-отчетной документации в лечебно-профилактических учреждениях системы здравоохранения.*
